# **1.INTRODUCTION**

## **1.1 Project overview**

Natural disasters not only disturb the human ecological system but also destroy the properties and critical infrastructures of human societies and even lead to permanent change in the ecosystem. Disaster can be caused by naturally occurring events such as earthquakes, cyclones, floods, and wildfires. Many deep learning techniques have been applied by various researchers to detect and classify natural disasters to overcome losses in ecosystems.

## **1.2 Purpose**

The main of the aim of the project to develop a multilayered deep convolutional neural network model that classifies the natural disaster and tells the intensity of disaster of natural The model uses an integrated webcam to capture the video frame and the video frame is compared with the Pre-trained model and the type of disaster is identified and showcased on the OpenCV window.

# **2.LITERATURE SURVEY**

## **2.1 Existing problem**

Natural disasters are uncontrollable phenomena occurring yearly which cause extensive damage to lives, property and cause permanent damage to the environment. However by, using Deep Learning, real-time recognition of these disasters can help the victims and emergency response agencies during the onset of these destructive events. At present, there are still gaps in the literature regarding real-time natural disaster recognition. Flood management, which involves flood prediction, detection, mapping, evacuation, and relief activities, can be improved via the adoption of state-of-the-art tools and technology. Thus, future efforts need to focus on combining disaster management knowledge, image processing techniques and machine learning tools to ensure effective and holistic disaster management across all phases.

## **2.3 Problem statement definition**

Natural disasters not only disturb the human ecological system but also destroy the properties and critical infrastructures of human societies and even lead to permanent change in the ecosystem. Many deep learning techniques have been applied by various

researchers to detect and classify natural disasters to overcome losses in ecosystems, but detection of natural disasters still faces issues due to the complex and imbalanced structures of images.

### 3.IDEATION AND PROPOSED SOLUTION

#### 3.1 Empathy map canvas

### 3.2 Ideation and Brainstorming

## Define your problem statement

 5 minutes

Natural disasters not only disturb the human ecological system but also destroy the properties and critical infrastructures of human societies and even lead to permanent change in the ecosystem. Many deep learning techniques have been applied by various researchers to detect and classify natural disasters to overcome losses in ecosystems, but detection of natural disasters still faces issues due to the complex and imbalanced structures of images. To tackle this problem, we developed a multilayered deep convolutional neural network model that classifies the natural disaster and tells the intensity of disaster of natural model

### 3.3 Proposed Solution

| S.NO      | Parameter                                      | Description   |
|-----------|--|---|
| <b>1.</b> | <b>Problem statement(problem to be solved)</b> | To tackle the problem of detecting natural disasters ,we developed a multilayered deep convolutional neural network model that classifies the natural disaster and tells the intensity of natural disaster. |
| <b>2.</b> | <b>Ideas/solution description</b>              | By predicting to occurrence of natural disaster, we can save thousands of lives and take appropriate measures to reduce property damage.  |
| <b>3.</b> | <b>Novelty/Uniqueness</b>                      | It finds the magnitude of impact , length of fore warning and duration of impact.   |
| <b>4.</b> | <b>Social impact/customer satisfaction</b>     | The most vulnerable are citizens and children .it can save lives of people can minimize the loss of infrastructure, finance.  |
| <b>5.</b> | <b>Business Model (Revenue model)</b>          | The government and private companies make use of this to get revenue in future  |
| <b>6.</b> | <b>Scalability of the solution</b>             | Disaster damages are measured involves examining the number of fatalities, of injuries, of people affected.   |

## 3.4 Problem Solution Fit

## 4.REQUIREMENT ANALYSIS

### 4.1 Functional requirement

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                                     |
|--------|-------------------------------|--|
| FR-1   | User Registration             | Register through mobile application<br>Call the given emergency number |
| FR-2   | User Confirmation             | Confirmation via Call back<br>Confirmation via Text                    |
| FR-3   | User Preparation              | Ensure safety of all people<br>Supply of canned food                   |
| FR-4   | User evacuation               | Waiting for evacuation team<br>Take refugee in nearest safe location   |

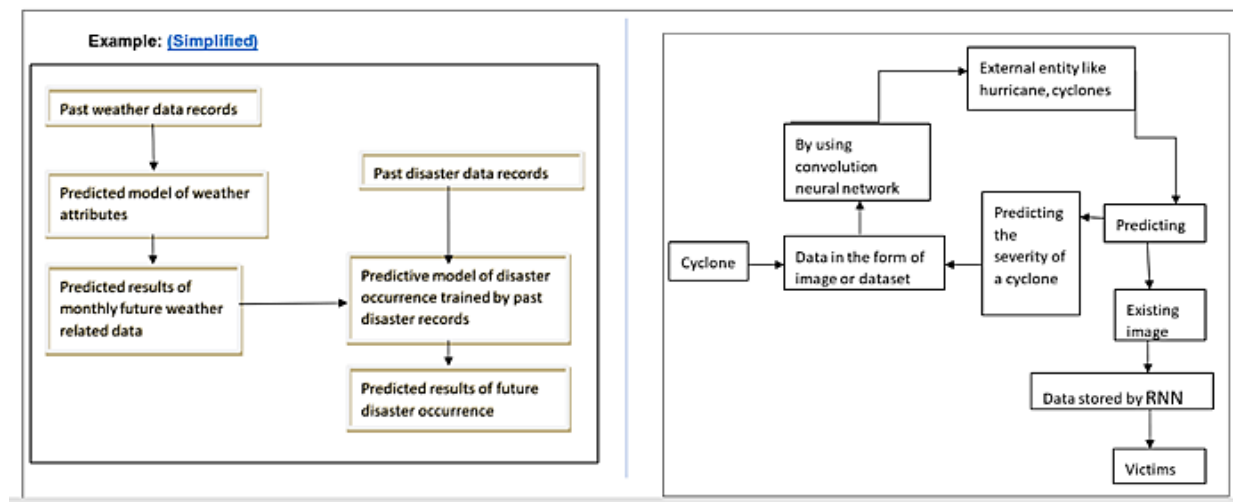

## 4.2 Non-Functional requirements

| FR No. | Non-Functional Requirement | Description  |
|--------|----------------------------|--|
| NFR-1  | Usability                  | It is easy and quick method to predict the disasters.  |
| NFR-2  | Security                   | The secure pattern shares components with monitor and control for logging and control access and for providing audit trails. |
| NFR-3  | Reliability                | It should be highly reliable.  |
| NFR-4  | Performance                | It deals with the measure of the system's response time.   |
| NFR-5  | Availability               | It can be available at the any time and we can access during any disasters.  |
| NFR-6  | Scalability                | Disaster damages are measured involves examining the number of fatalities, of injuries, of people affected.                  |

## 5.PROJECT DESIGN

### 5.1 Data flow diagram

Data Flow Diagrams:

## 5.2 User Stories

| User Type              | Functional Requirement (Epic) | User Story Number | User Story / Task   | Acceptance criteria                                       | Priority | Release  |
|------------------------|-------------------------------|-------------------|---|---|----------|----------|
| Customer (Mobile user) | Registration                  | USN-1             | As a user, I can register for the application by entering my email, password, and confirming my password. | I can access my account / dashboard                       | High     | Sprint-1 |
|                        |                               | USN-2             | As a user, I will receive confirmation email once I have registered for the application                   | I can receive confirmation email & click confirm          | High     | Sprint-1 |
|                        |                               | USN-3             | As a user, I can register for the application through Facebook  | I can register & access the dashboard with Facebook Login | Low      | Sprint-2 |

|                         |                |       |   |                              |        |          |
|-------------------------|----------------|-------|---|------------------------------|--------|----------|
|                         |                | USN-4 | As a user, I can register for the application through Gmail             | I can login with my password | Medium | Sprint-1 |
|                         | Login          | USN-5 | As a user, I can log into the application by entering email & password  | I can see the dashboard now  | High   | Sprint-1 |
|                         | Dashboard      | USN-6 | As a user, I can update Disaster incidents.                             | I can update now.            | Medium | Sprint-1 |
| Customer (Web user)     |                | USN-7 | As a user, I can view Map Data.   | I can see Map Data.          | Medium | Sprint-1 |
| Customer Care Executive | Authentication | USN-8 | As a Community Leader, I can log into the application using my password | I can access my account.     | High   | Sprint-1 |
|                         |                | USN-9 | As a Community Leader, I can apply for membership.                      | I can apply membership.      | High   | Sprint-1 |

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|-----------|-------------------------------|-------------------|-------------------|---------------------|----------|---------|
|-----------|-------------------------------|-------------------|-------------------|---------------------|----------|---------|

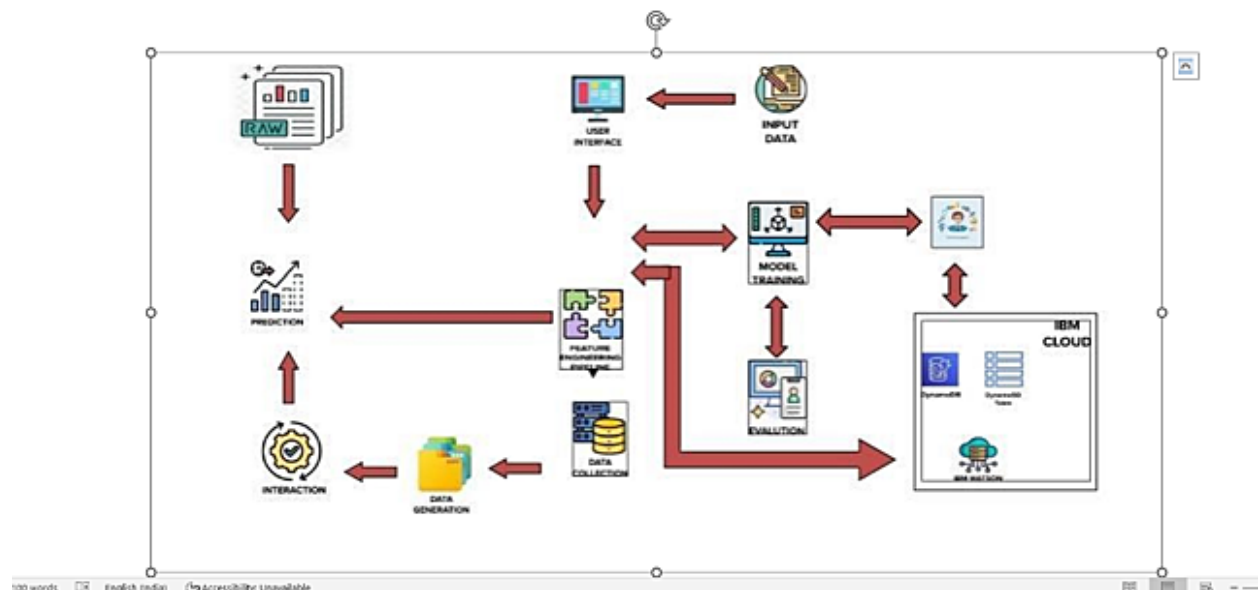

|   |                             |        |   |                                     |      |          |
|---|-----------------------------|--------|---|-------------------------------------|------|----------|
|   |                             | USN-10 | As a Community Leader, I can verify Disaster.                 | Disaster verification               | High | Sprint-1 |
| System Administrator                      | Membership Approval         | USN-11 | As a administrator, I can approve the Membership application. | I can approve membership.           | High | Sprint-1 |
|   | Update Disaster information | USN-12 | As a administrator, I can update information about Disaster.  | I can update disaster information.  | High | Sprint-1 |
|   | Disaster verification       | USN-13 | As a administrator, I can verify disaster.                    | I can verify Disaster               | High | Sprint-1 |
| Community Leader and System Administrator | Disaster Queries            | USN-14 | Both are can able to ask disaster queries.                    | We can ask Queries about disaster.  | Low  | Sprint-2 |
|   | Disaster Reports            | USN-15 | Both are can able to give disaster reports.                   | Both will give the disaster reports | Low  | Sprint-2 |

## 5.3 Solution And Technical Architecture

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

1. Find the best tech solution to solve existing business problems.
2. Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
3. Define features, development phases, and solution requirements.

Provide specifications according to which the solution is defined, managed, and delivered.

## 6 PROJECT PLANNING AND SCHEDULING

### 6.1 Sprint Planning and Estimation

Use the below template to create product backlog and sprint schedule

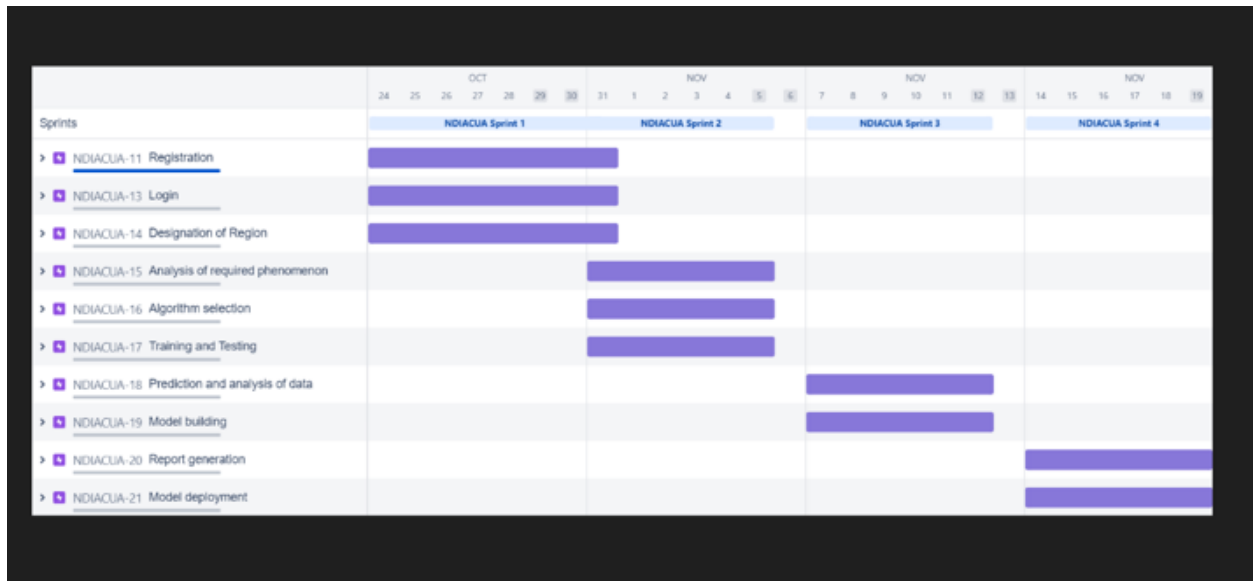

| Sprint   | Functional Requirement (Epic)   | User Story Number | User Story / Task   | Story Points | Priority | Team Members      |
|----------|---------------------------------|-------------------|---|--------------|----------|-------------------|
| Sprint-1 | Registration                    | USN-1             | As a user, I can register for the application by entering my email, password, and confirming my password. | 2            | Low      | Maya Krishnan S   |
| Sprint-1 | Registration                    | USN-2             | As a user, I will receive confirmation email once I have registered for the application                   | 3            | High     | Arumuga Eswaran M |
| Sprint-1 | Login                           | USN-3             | As a user, I adapt to logging into the system with credentials.   | 2            | Low      | Mugilan S         |
| Sprint-1 | Designation of Region           | USN-4             | As a user, I can collect the dataset and select the region of interest to be monitored and analysed.      | 5            | Medium   | Mohamed Isam J    |
| Sprint-2 | Analysis of required phenomenon | USN-5             | As a user, I can regulate certain factors influencing the action and report on past event analysis.       | 4            | High     | Mugilan S         |
| Sprint-2 | Algorithm selection             | USN-6             | As a user, I can choose the required algorithm for specific analysis.                                     | 4            | Medium   | Arumuga Eswaran M |
| Sprint-2 | Training and Testing            | USN-7             | As a user, I can train and test the model using the algorithm.  | 4            | High     | Mohamed Isam J    |

| Sprint   | Functional Requirement (Epic)   | User Story Number | User Story / Task   | Story Points | Priority | Team Members      |
|----------|---------------------------------|-------------------|---|--------------|----------|-------------------|
| Sprint-3 | Prediction and analysis of data | USN-8             | As a user, I can predict and visualise the data effectively.        | 4            | High     | Maya Krishnan S   |
| Sprint-3 | Model building                  | USN-9             | As a user, I can build with the web application.                    | 8            | High     | Mugilan S         |
| Sprint-4 | Report generation               | USN-10            | As a user, I can generate detailed report on product data analysis. | 4            | High     | Arumuga Eswaran M |
| Sprint-4 | Model deployment                | USN-11            | As an administrator, I can maintain thirdparty services             | 8            | High     | Mohamed Isam J    |

## 6.2 Sprint Delivery Schedule

| Sprint   | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date (Actual) |
|----------|--------------------|----------|-------------------|---------------------------|---|------------------------------|
| Sprint-1 | 12                 | 6 Days   | 24 Oct 2022       | 29 Oct 2022               | 12  | 29 Oct 2022                  |
| Sprint-2 | 12                 | 6 Days   | 31 Oct 2022       | 05 Nov 2022               | 12  | 05 Nov 2022                  |
| Sprint-3 | 12                 | 6 Days   | 07 Nov 2022       | 12 Nov 2022               | 12  | 12 Nov 2022                  |
| Sprint-4 | 12                 | 6 Days   | 14 Nov 2022       | 19 Nov 2022               | 12  | 19 Nov 2022                  |

## 10. ADVANTAGES AND DISADVANTAGES

### ADVANTAGES:-

1. Humans also need breaks and time offs to balance their work life and personal life. But AI can work endlessly without breaks.
2. With the use of various AI-based techniques, we can also anticipate today's weather and the days ahead.
3. Helpful in getting life back on track. Their Alert nature able to respond effectively and efficiently which defend the society from large scale damages.

### DISADVANTAGES:-

1. It involves huge money to be equipped.
2. Problems faced in life basic needs. One application of artificial intelligence is

a robot, which is displacing occupations and increasing unemployment .

4. Machines can perform only those tasks which they are designed or programmed to do, anything out of that they tend to crash or give irrelevant outputs which could be a major backdrop.

## **11 CONCLUSION**

Many researchers have attempted to use different deep learning methods for detection of natural disasters. However, the detection of natural disasters by using deep learning techniques still faces various issues due to noise and serious class imbalance problems. To address these problems, we proposed a multilayered deep convolutional neural network for detection and intensity classification of natural disasters. The proposed method works in two blocks—one for detection of natural disaster occurrence and the second block is used to remove imbalanced class issues. The results were calculated as average statistical values: sensitivity, 97.54%; specificity, 98.22%; accuracy rate, 99.92%; precision, 97.79%; and F1-score, 97.97% for the proposed model. The proposed model achieved the highest accuracy as compared to other state-of-the-art methods due to its multilayered structure. The proposed model performs significantly better for natural disaster detection and classification, but in the future the model can be used for various natural disaster detection processes.

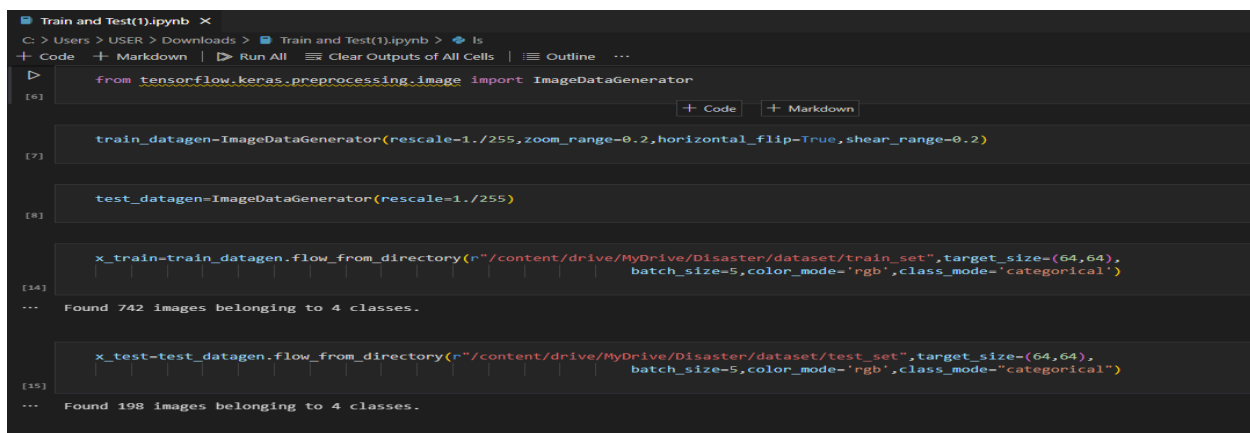

## **12 FUTURE SCOPE**

AI -smart technology, which has enabled accurate and speedy solutions. If harnessed properly, the technology has the potential of predicting, preventing and providing response faster than ever. AI data setups are trained to predict seismic data to analyze the patterns of earthquake occurrences, rainfall records

and monitor flooding, measure the intensity hurricanes and read the geological data to understand volcanic eruptions, such systems can reduce the catastrophic impact of natural disasters. Last year, Google's Pilot project to monitor flood in India with the help of AI, was a successful one – it was a Patna project. They were able to predict floods and the regions that it would be affected due to the natural disaster with an accuracy of over 90%. It was possible owing to the combination of data from government agencies that provide on-ground information – from measuring devices placed on the spot and satellite captured images of flood-prone areas. They ran hundreds of thousands of simulations on its machine learning (ML) models to predict the flow of water. In the future, leveraging AI can help disaster management bodies install drones, sensors and robots to provide accurate information about damaged buildings and landscapes, potential floods, making rescue missions safer and less time-consuming. There is a need for smart technology to be integrated within our local communities. Immediate response and tech-based solutions can help reduce the extent of damage. However, since AI is based on machine codes, there is a scope of limitations and errors. However, the amalgamation of human, empathy and alertness, could do wonders in the field of crisis management.
